EDUCATION

Kennesaw State University **Marietta, Georgia**

Bachelor of Science in Computer Science, Minor in Mathematics *Expected Graduation: December 2027*

- **GPA:** 3.5/4.0
- **Related Coursework:** Object-Oriented Programming, Database Systems, Discrete Mathematics, Calculus I-III, Linear Algebra, Data Structures, Intermediate Mechatronics Programming, Algorithm Analysis

SKILLS

Languages: C# (Proficient), Java (Intermediate), Typescript, JavaScript, SQL, Python, C++
Frameworks/Libraries: Angular 20, Spring Boot, .NET, .NET Core, React
AI Tools: Claude Code, GitHub Copilot
Developer Tools: Azure DevOps, Git, MS SQL Server, PostgreSQL, Postman, Linux (Ubuntu)
Practices: Object-Oriented Programming, Agile/Scrum, CI/CD, REST API design/documentation, Database Design, Debugging

WORK EXPERIENCE

Institute of Nuclear Power Operations **Atlanta, Georgia**

Full-Stack Software Engineer Intern *May 2026-Present*

- Shipped **20+ full-stack features** and bug fixes across mission-critical nuclear applications in **C#, .NET, Angular, and MS SQL Server,** directly improving system reliability and accelerating internal workflows for **100+ users.**
- Contributed to **Agile ceremonies** including sprint planning, standups, and retrospectives across 3-week sprints, helping the team consistently deliver features on schedule and surface process improvements.
- Owned design-to-release of a product closure workflow in an enterprise application used by **100+ nuclear evaluators**; broke an ambiguous requirement into validation rules for 5 user scenarios, **restoring lost functionality across 10+ product types** and enforcing compliant status transitions.
- Planned and executed a purge of **1000+ user records across 3 production database** servers in a single maintenance window with zero downtime and no unintended data loss.

Kennesaw State University – College of Computing and Software Engineering **Marietta, Georgia**

Programming Tutor/Lab Assistant *January 2025-Present*

- Tutored **50–60 students** per month in programming concepts, algorithmic thinking, and debugging through one-on-one and small-group sessions, contributing to improved course performance and a **99% student satisfaction rate**.

PROJECTS

Gesture-Controlled Alarm Clock | Python, FastAPI, MediaPipe, OpenCV, React **Marietta, Georgia**

Full-Stack Developer *September 2026-Present*

- Building a full-stack computer vision alarm that only shuts off when the user holds a hand gesture, using **MediaPipe gesture recognition** on a live **OpenCV webcam feed**
- Designed a multithreaded **FastAPI backend** with the scheduler and camera on separate threads and thread-safe shared state; exposes a REST API, streams **annotated MJPEG video with hand landmarks**, and falls back to a manual off button if failure occurs
- Reduced false shut-offs by **converting noisy per-frame predictions into reliable triggers** using a confidence threshold, multi-frame hold detection, and a cooldown
- Developed a **React frontend** displaying real-time alarm state and gesture progress

Supply Chain Warehouse Management REST API / Spring Boot, Java, MySQL **Kennesaw, Georgia**

Full-Stack Developer *September 2025- November 2025*

- Built a **RESTful API with Spring Boot** to manage warehouse operations **across 19 endpoints,** supporting product tracking, order management, and supply chain visibility.
- Designed a normalized relational database schema with **4 tables using JPA/Hibernate** and structured the application with **MVC architecture** to enable clean separation of concerns and straightforward feature extensibility.

LEADERSHIP/ACTIVITIES

Academic Chair, ColorStack *December 2025-Present*

- Advance ColorStack's mission by collaborating with Black and Latinx CS students across campuses to promote academic growth, community engagement, and peer support in tech

Member, Software Acceleration Team at KSU *August 2026-Present*

- Building the club's team website using Astro, delivering a fast, static site that showcases projects, workshops, and industry connections for Kennesaw State computing students.
- Collaborate with teammates in a student-run engineering club using Git workflows and CI/CD pipelines, while presenting and defending project work in peer review sessions
